CHECKPOINT DEACTIVATION PAD

Good customer service can give retailers a competitive advantage in today's overcrowded retail marketplace. At the point-of-sale (POS), minimizing the time customers wait in line can be the first step to better customer service. With Checkpoint's non-contact deactivation pads, retailers can protect merchandise without increasing the customer's wait at checkout to remove or manually detune the security tag.

Checkpoint's deactivation pads automatically deactivate disposable security tags as merchandise is passed over the pad, through the deactivation field. The large field, made possible with radio-frequency technology, assures that each tag is deactivated successfully. Customers are unaware that the entire process has taken place. Checkpoint deactivation pads provide retailers with safe, easy and effective deactivation for protected store merchandise.

Benefits

· Can be mounted on top or underneath the counter at the cash-wrap area

· Deactivation is quick, reliable and effortless

· Constructed of durable ABS plastic

· Will not damage credit, bank or ATM cards

Deactivation Pad Specifications

Size:	12.4" x 12.4" x .4" (31.7cm x 31.7cm x 1.2cm)
Material:	ABS Plastic
Color:	Gray
Weight:	1lbs. 7.8oz.
